

Protection^{Plus}[™]

Protection from plant pests, *Plus* it's eco-friendly!

Benefits of Protection *Plus*[™]

Preliminary certified laboratory testing shows that ***the first application*** of Protection *Plus*[™] will kill 98.55% of Russet Mites, 89.08% of Spider Mites, 98.87% of Aphids, 90.07% of Thrips, and 100% of Whitefly present on a leaf. It is also an excellent fungicide to treat Powdery Mildew and when used in an IPM program, pests will be under control and consistent harvests will be obtained.

Important: Protection *Plus*[™] ***does not*** have strong chemical detergents or oils added to its formula. There is a reason for that. Most consumers don't realize that an oil-based pesticide needs a heavy-duty detergent in the formula to make it water-soluble. Once an oil-based insecticide has been sprayed, it not only blocks light from hitting the leaf, it blocks important air and water passages too. Any reduction of air or water entering or leaving the plant will reduce plant growth and health. Any reduction of light to the leaf is also undesirable.

Cost of Protection *Plus*[™]

Protection *Plus*[™] is the least expensive high-quality pesticide on the market. It is multi-tasking and suitable for use on consumable plants. Applications are affordable and ideal for on-going IPM programs. Every store needs a simple workhorse pesticide for commercial growers.

EPM[™] Environmental Plant Management

EPM[™] manufactures eco-system safe products. What does that mean? It means EPM[™] makes sure that the ingredients used in its products are not harmful to the environment and in many cases, the environment may get better after their use. EPM[™] also takes time to help customers better understand how to apply the products it manufactures so that customers only use the amount needed to get the job done.

In a Nutshell, Protection *Plus*[™]

- has a *verified* high kill percentage for Russet and Spider mites, Whitefly, Aphids and Thrips
- may be applied to kill and repel Root Aphids
- kills the eggs, larvae, young and adult insects
- reduces or eliminates mold, fungus, and powdery mildew
- may be applied to soil or hydroponic systems to kill or repel insects at a very low cost
- is one of the most concentrated and economical pesticides on the market for use on food crops
- is a universal multi-tasking pesticide
- is a simple workhorse pesticide for commercial growers and their IPM programs
- no failing lab tests from this product, purity tested for 480 ingredients that include heavy metals, bacteria, adverse chemicals and more
- won't leave foliage and flowers sticky like oil-based pesticides can
- won't make the eco-system sick, can be used around KOI, trout, and other fish
- may make the eco-system better than it was before the application
- eliminates biofilm on roots, soil or hydroponics-keeps hydroponic systems clean
